

## HEAT SHIELD for FIAT-X250

LEVELSYSTEM  
MOTORHOME  
NEW

E&P Hydraulics designed a new protective heat shield to be used as a shield between the Telescopic Jack and the exhaust system on the right front location of a FIAT DUCATO X-250 chassis type.

We introduce this aluminum heat-shield to be sure the hydraulic-oil into the right front Jack of the level-system will not be overheated during moments of long-standing when the engine is running, for example, during traffic jams, or when maneuvering slowly.
