

MOUNTING BRACKET UPGRADE

FIAT-X250 • FRONTSIDE • CP7369

E&P Hydraulics have redesigned our **CP7369 mounting bracket**, used to mount the hydraulic jack to the front of the **FIAT Ducato X-250/290** type chassis. This bracket is to be used with the EP-019 HYD (L/XL) jacks.

The aim of this new design is to make the product:
Stronger | Lighter in weight (- 1.2Kg) | Easier to assemble

Within this bracket set, the below new mounting materials are supplied for installation:

- 12 pcs. M10 nut
- 12 pcs. M10 spring washer
- 12 pcs. M10x30 Allen screw **fix with a force of 50 nm**

Extra note: For the older versions of the Fiat chassis, we have also designed a new type of heat shield which is placed on the right front side between the hydraulic jack and the catalyst exhaust. Four additional spacers must be used during assembly. With the latest Fiat versions, the heat shield is not necessary because the catalyst exhaust is further away from the hydraulic jack.

1 set includes: 2 brackets (left and right) and mounting parts
